

700 Series

# Proportional Pressure Reducing Valve

- Long downhill lines
  - ☐ Serial pressure reduction
  - ☐ Leakage and burst protection
- High differential pressure systems
  - Protection against cavitation damage
  - Throttling noise reduction

The Model 720-PD Proportional Pressure Reducing Valve is a hydraulically operated, diaphragm actuated control valve that reduces higher upstream pressure to lower downstream pressure at a fixed ratio.

### Features and Benefits

- Line pressure driven Independent operation
- Elegant simplicity
  - Most cost effective
  - □ Simple to maintain
  - Minimal external accessories
- Variety of reduction ratios Perfect mission matching
- Built-in check feature Replacing line sized check valve
- In-line serviceable Easy maintenance
- Double chamber
  - □ Moderated valve reaction
  - □ Protected diaphragm
- Flexible design Easy addition of features
- Semi-straight flow Non-turbulent flow
- Stainless Steel raised seat Cavitation damage resistant
- Obstacle free, full bore Uncompromising reliability
- V-Port Throttling Plug Low flow stability

## **Major Additional Features**

- Solenoid control 720-PD-55
- Closing & opening speed control **720-PD-03**
- Emergency pressure reducing valve **720-PD-59**
- Pressure sustaining **723-PD**

See relevant BERMAD publications.

700 Series

Model 720-PD

# **Operation**

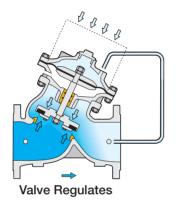

The Model 720-PD is a pilotless, double chambered, control valve. The downstream pressure is applied as the closing force on the top side of both the diaphragm and the seal disk areas. The upstream pressure is applied as the opening force on the bottom side of the seal disk area.

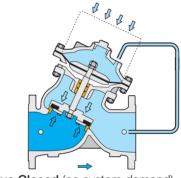

The net force, resulting from the two opposing dynamic forces acting on the actuator's diaphragm and seal, determines the degree to which the valve is open. The valve seeks the point where these forces are equal. As the ratio of the areas of the seal disk and the diaphragm is constant, the ratio of the upstream and downstream pressures is constant as well.

A rise in downstream pressure causes a momentary increase of the closing force. As a result, the valve throttles closed reducing downstream pressure according to the constant ratio.

Adding a V-Port Throttling Plug modifies valve ratio by increasing the effective diaphragm area.

When demand is zero, downstream pressure rises in proportion to the ratio, causing the valve to shut off.

Valve Closed (no system demand)

## **Engineer Specifications**

The Proportional Pressure Reducing Valve shall reduce higher upstream pressure to lower downstream pressure at a fixed ratio. The valve's control loop shall not consist of any pilot.

Main Valve: The main valve shall be a center guided, diaphragm actuated globe valve of either oblique (Y) or angle pattern design. The body shall have a replaceable, raised, stainless steel seat ring. The valve shall have an unobstructed flow path, with no stem guides, bearings, or supporting ribs. The body and cover shall be ductile iron. All external bolts, nuts, and studs shall be Duplex® coated. All valve components shall be accessible and serviceable without removing the valve from the pipeline.

**Actuator:** The actuator assembly shall be double chambered with a sealed inherent separating partition between the lower surface of the diaphragm and the main valve. The entire actuator assembly (seal disk to top cover) shall be removable from the valve as an integral unit. The stainless steel valve shaft shall be center guided by a bearing in the separating partition. The replaceable radial seal disk shall include a resilient seal and shall be capable of accepting a V-Port Throttling Plug by bolting.

**Control System:** The control system shall consist of a control tube connecting the upper control chamber to the valve outlet. All fittings shall be forged brass or stainless steel. The assembled valve shall be hydraulically tested to customer requirements.

**Quality Assurance:** The valve manufacturer shall be certified according to the ISO 9001 Quality Assurance Standard. The main valve valve shall be certified as a complete drinking water valve according to NSF, WRAS, and other recognized standards.

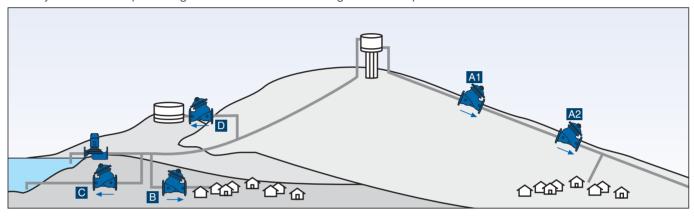

700 Series

Model 720-PD

# **Typical Applications**

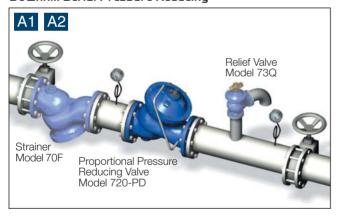

There are two major applications for the Model 720-PD Proportional Pressure Reducing Valve:

- Long downhill lines:
  - Systems A1 and A2 prevent the downhill line from exceeding its pressure rating.
- High differential pressure systems:
  - System B reduces cavitation damage and noise level by distributing the load of the high differential pressure.
  - □ System C illustrates protecting a circulation valve from high differential pressure and resultant severe cavitation.
  - System D shows protecting a level control valve from high differential pressure.

Data is for Y-pattern, flat disk valves For more flow charts, refer to Engineering Section

#### Main Valve

Valve Patterns: "Y" (globe) & angle Size Range: 11/2-32" (40-800 mm) End Connections (Pressure Ratings):

Flanged: ISO PN16, PN25 (ANSI Class 150, 300) Threaded: BSP or NPT Others: Available on request **Working Temperature:** Water up to 80°C (180°F) **Standard Materials:** 

Body & Actuator: Ductile Iron

Internals:

Stainless Steel, Bronze & coated Steel

Diaphragm:

NBR Nylon fabric-reinforced

Seals: NBR Coating:

Fusion Bonded Epoxy, RAL 5005 (Blue) NSF & WRAS approved or Electrostatic Polyester Powder, RAL 6017 (Green)

#### Reduction Ratios Table

Valve Size	Plug lype						
valve Size	Flat-D	Disc	V-Port				
11/2- 21/2"	3.7		4.0				
40- 65 mm	2.5	5	2.7				
3"	2.6		2.9				
80 mm	2.2	2	2.4				
4"	2.5	5	2.8				
100 mm	2.0	)	2.2				
6"	2.5	5	2.7				
150 mm	2.0	)	2.2				
8"	2.4	1	2.6				
200 mm	2.0	)	2.2				
10"	2.3	3	2.5				
250 mm	2.0	)	2.2				
12-14"	2.2	2	2.4				
300-350 mm	2.0	)	2.2				
16-20"	2.2		2.3				
400-500 mm	2.0	)	2.2				
Standard ratio			Optional ratio				

- The reduction ratios are based on flow velocity of 2.0-3.0 m/sec.
- Reduction ratio may vary at extreme flow velocity & upstream pressure.
- 24-32" (600-800 mm) reduction ratio: 2.2

#### Control System

#### **Standard Materials:**

#### Accessories:

Bronze, Brass, Stainless Steel & NBR **Tubing:** Copper or Stainless Steel Fittings: Forged Brass or Stainless Steel

## How to Order

Please specify the requested valve in the following sequence: (for more options, refer to Ordering Guide).
