

# Water combination air valve class PN 64 Mod.FOX 3F - HP

The air valve will ensure the proper operation of the pipeline network allowing the release of the air pockets during working conditions, the evacuation and the entrance of large volumes of air during filling and draining operations.

### Construction and advantages

- Body in electro welded steel provided with internal ribs for 1) Discharge of large volumes of air consistent and accurate assembly guiding,
- Supplied with flanges in carbon steel PN 16/25/40/64.
- Mobile block group formed by a full polypropylene cylindrical float (\*\*) and an upper disk in polypropylene.
- Nozzle and gasket holder (pat. pending) wear resistant thanks to gasket compression control.
- Maintenance can be easily performed from the top without removing the air valve from the pipe.
- Mesh and cap in stainless steel.

## Operating principle

During pipe filling it is necessary to discharge as much air as water flows in.

2) Entrance of large volumes of air

During pipeline draining or bursting phases it is necessary to bring in as much air as the quantity of out-flowing water to avoid vacuum conditions.

**3) Air release during working conditions.** During operation, an air pocket is accumulated in the upper part of the valve, little by little it is compressed and its pressure arrives to water pressure, its volume increases pushing water downwards. Following Archimede's principle the float, no longer sustained by water thrust, will drop freeing the nozzle hole helping the release of the air pocket, while the upper disk closes the main orifice due to internal pressure.

For air flow performances of FOX 3F-HP please refer to the chart depicted on the next page.

<sup>(\*\*)</sup> Full polypropylene cylindrical floats to avoid deforming phenomena at high pressure and lathe shaped to guarantee:

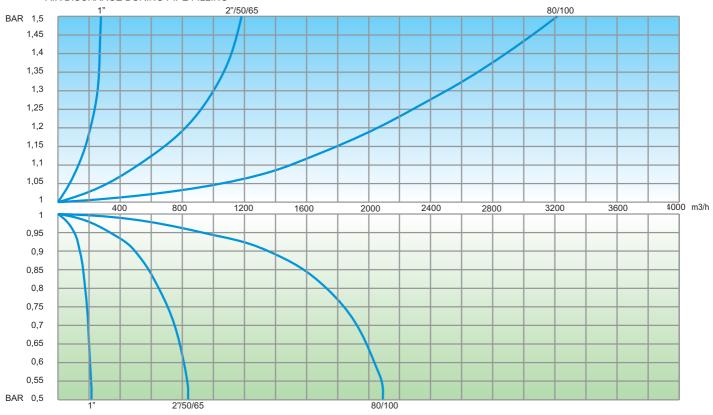

a) a greater sliding precision inside the body processed ribs;

b) a perfectly vertical thrust;

### Air flow performance charts.

AIR ENTRANCE DURING PIPE DRAINING

## **Working conditions**

Potable water 70°C Max; Maximum pressure 64bar; Minimum pressure 0,2 bar ( lower on request)

Technical features
Body and flange
Electro welded steel epoxy powder coated
using fluidized bed technology
Mesh and cap in stainless steel
Seat in stainless steel
Upper flat in polypropylene
Nozzle in stainless steel
Float in polypropylene
Nuts and bolts in stainless steel
Gaskets in NBR
