

## Hydraulic Pressure Control, On-Off Deluge Valve

Model: FP 400E-5DC

UL LISTED

### Typical Applications

Fluctuating or over pressure

Petrochemical facilities

Tunnels

Power plants & transformers

Flammable materials storage

Gas storage tanks

Hydraulic remote controlled systems

### Features and Benefits

- **Pressure control function** – Constant preset downstream pressure
- **Remote reset** – Shut-off on remote command
- **One-piece molded elastomeric moving part** – No maintenance required
- **Simple design** – Cost effective
- **Obstacle-free full bore** – Uncompromising reliability
- **Factory pre-assembled trim** – Out-of-box quality
- **In-line serviceable** – Minimal down time

### Optional Features

- **Water motor alarm**
- **Alarm pressure-switch** (code: P or P7)
- **Seawater service** (add FS as prefix to model)
- **Valve Position Single/Double Limit Switches**

## Operation

The BERMAD Model FP 400E-5DC is suitable for systems that include wet pilot lines with closed fusible plugs (thermal releases), and piping systems with a wide variety of open nozzles. Providing boosted local pressure release from its control chamber, Model FP 400E-5DC is recommended for systems with remote and/or elevated fusible plug lines. Combining a pressure control feature, it is also suitable for systems with high pressure supply source and/or relatively low flow.

In the SET position the line-pressure, supplied to both the main valve control chamber [1] and to a Hydraulic Relay Valve (HRV) [2] via the priming line [3], and through a Check Valve [4], an Accelerator [5] with priming restriction, and the wet-pilot line [6] Restriction [7], is trapped by the Check Valve, by the closed HRV, and by a closed Manual Emergency Release [8]. The trapped pressure holds the main valve's diaphragm and plug against the valve seat [9], sealing it drip-tight and keeping the system piping dry. The HRV is held closed by the line pressure in the wet pilot line. Under FIRE condition, a pilot line hydraulic pressure drop opens the HRV. Pressure is then released from the main valve's control chamber to the downstream, through the open HRV and the Pressure Reducing (PR) Pilot valve [10]. This allows the main valve to open, and water to flow into the system piping and to the alarm device. Should system pressure rise above PR pilot setting, the PR pilot throttles, thereby enabling pressure to accumulate in the valve control chamber. This causes the FP 400E-5DC to throttle closed, decreasing system pressure to PR pilot setting. The Manual Emergency Release [8], overrides the PR pilot, causing the valve to open fully.

## Engineer Specifications

- The On-Off deluge valve shall be a UL-Listed, hydraulically remote controlled elastomeric type globe valve with a **rolling-diaphragm**.
- The valve shall have an **unobstructed flow path**, with no stem guide or **supporting ribs**.
- Valve actuation shall be accomplished by a fully peripherally supported, one-piece balanced rolling-diaphragm, vulcanized with a rugged radial seal disk. The diaphragm assembly shall be the only moving part.
- The valve shall have removable cover for quick in-line service enabling all necessary inspection and servicing.
- The control trim materials shall consist of St.St. 316 tubing and fittings, and plated brass accessories, including Accelerator, HRV hydraulic actuated pilot valve, 2-Way Pressure Reducing Pilot, Y strainer and Manual Emergency Release.
- The control trim shall be supplied as an assembly, pre-assembled and hydraulically tested at an ISO 9000 and 9001 certified factory.
- The Pressure Control and Hydraulically Remote Controlled, On-Off Deluge Valve shall open and close in response to pilot line pressure drop, reducing higher upstream pressure to preset lower downstream pressure.

## System Components

- 1 - Main Valve, BERMAD FP 400E Series
- 2B - Accelerator with Priming Restriction
- 2R - Pressure Reducing Pilot
- 4B - Priming Strainer
- 7B - Check Valve
- 15B - Manual Emergency Release
- 18B - Priming Ball Valve
- 26B - Hydraulic Relay Valve (HRV)
- Optional
- S - Valve Position Limit Switch / Switches

### UL Listed

The BERMAD Model FP 400E-5DC is UL-Listed.

The installation shall include Indicating and Drain Components.

# BERMAD Fire Protection

### Notes:

- L<sub>1</sub> is for flanged ANSI #150 and ISO PN16.
- L<sub>2</sub> is for grooved end connections (Ductile Iron Only).
- Provide adequate space around valve for maintenance.
- Data is for envelope dimensions, specific component positioning may vary.

### Connection Standard

- Flanged: ANSI B16.42 (Ductile Iron), B16.5 (Steel & Stainless Steel), B16.24 (Bronze) or ISO PN16
- Grooved: ANSI/AWWA C606 for 2, 3, 4, 6 & 8"

### Water Temperature

- 0.5 – 50°C (33 – 122°F)

### Available Sizes

- 1½, 2, 2½, 3, 4, 6, 8, 10 & 12"
- UL-Listed for sizes 1½, 2, 2½, 3, 4, 6, 8 & 10"

### Pressure Rating

- Max. inlet: 250 psi (17 bar)
- Set: 30-165 psi (4.5-11.5 bar)

### Manufacturers Standard Materials

#### Main valve body and cover

- Ductile Iron ASTM A-536

#### Main valve internals

- Stainless Steel 304 & Cast Iron

#### Control Trim System

- Brass control components/accessories
- Forged Brass pressure reducing pilot with St. St. 304 internals & NBR elastomers

- Stainless Steel 316 tubing & fittings

#### Elastomers

- Nylon fabric reinforced polyisoprene NR

#### Coating

- Electrostatic Powder Coating Polyester, Red (RAL 3002)

### Optional Materials

#### Main valve body

- Carbon Steel ASTM A-216 WCB
- Stainless Steel 316
- Ni-Al-Bronze ASTM B-148

#### Control Trim

- Stainless Steel 316
- Monel® and Ni-Al-Bronze
- Hastalloy C-276

#### Elastomers

- NBR
- EPDM

#### Coating

- High Build Epoxy Fusion-Bonded with UV Protection, Anti-Corrosion
